

# FREDMAN CARITA® FIBER CLOTHES FOR CLEANING AND COOKING

The best features of Fredman Carita® fiber cloth become apparent when used in cleaning and cooking. When thrown away after a day's use, any bacteria and impurities left in the cloth are also disposed of. This prevents dirt and microbes from spreading. The fiber cloth is suitable for dry, damp and wet cleaning and can be used with a mild detergent if necessary. The fiber cloth can also be washed and dried between uses. Fiber cloths in green packaging are fully biodegradable. All of our Finnish-made fiber cloths are also food safe and therefore suitable to use also in cooking.
